Be quick with the above models as we only have one of each in stock.

Don't forget, we can also cater for the budget conscious audiophile with the full range of Cambridge

Audio products, and Whatmough Monitors Magnum 3 speaker system.

Is 4000 watts enough? And that's just the bass!

As many of you already know, the biggest news this year is the release of our Galaxy, coming in at \$45,000 a pair delivered and installed, this speaker is set to rival the worlds finest offerings.

With thunderous bass extending down to 8 Hz, and high frequencies to above 40 kHz, you won't be missing out on anything. Sub woofers not required!

Coupled with the awesome Primare A32 power amplifier and PRE30 pre-amp, the performance is breathtaking. From classical string quartets to heavy metal, the Galaxy / Primare system is as pure as it gets.

Nothing comes close to the purity and realism of this combination. Please contact us for an audition - info@equinoxaudio.com.au

Ultra high end performance – For only \$9500!

Another new speaker soon to be released is the Neptune. The Neptune is 3 way, 5 driver floor standing speaker system, suitable for use in typical sized listening rooms. Combined with the Primare I30 integrated amplifier and CD31 CD player,

this system provides superior state of the art sound rivalling systems costing over \$30,000, for only \$16,500. Please contact us for an audition of this wonderful system – info@equinoxaudio.com.au

Alternatively, this system is being demonstrated for the Sydney Audio Club on Sunday October 10th.

Hints & Tips.

There's a growing trend to use EQ to sort out poor sounding rooms. **DON'T DO IT!**
Bass traps, broad band absorbers, curtains, IE room treatments are far better for correcting room modes, as these items attack the core problem by absorbing the sound and reducing decay. EQ only deals with the amplitude response, therefore leaving decay the same. EQ also only works for one single location in the room, treatments benefit every location within the room. 'Til the next time.....
